SOLSTICE

SYSTEM

Performance and affordability in a single nurse call system.

The Solstice is intended exclusively for senior's residences. Both powerful and reliable, it can broadcast calls via private transmitter and publishes calls on both analogue and digital displays, making it a remarkable choice in terms of price-quality-ratio. Designed to respond to emergencies where every second counts, this call system is flexible, reliable and durable. It has a simple design and call point monitoring, as well as system full supervision.

A system designed
for senior's homes

Modular installation, user-friendly operation

- Fully-supervised voiceless system
- Instant call transmission to local pagers
- Archiving software generating activity reports
- Large-scale deployment using satellites connected to the communication BUS
- Create categories, schedules and escalation management
- Automatic detection of non-movement

A call system suited to your needs

Unlike a burglar alarm system that was not designed for nurse call, the Solstice system can meet your specific needs and expectations. The existing wiring of conventional systems is usually compatible with the Solstice system.

OUR SOFTWARES FOR **SOLSTICE**

Acquisition II 500-630

Software that displays calls in real-time and stores the system history in a local database. Includes a search feature that allows you to search the system call history to generate a report to Word, Excel and PDF formats. Runs on Windows 7, Windows 8, Windows 8.1, Windows 10.

Luvicom is a Quebec company that manufactures intercommunication and nurse call systems. Luvicom relies on its forty years of experience in the field of design and integration of high-tech systems, as well as its solid team of engineers and technicians to serve its customers with accuracy. We are committed to meeting the intercommunication needs of our diverse customers.

Continuously oriented towards excellence, Luvicom works tirelessly to develop efficient and durable equipment that pushes boundaries in the world of intercommunication.
